[View Forum Message](#) <> [Reply to Message](#)

Hi there,

I moved from Ubuntu and tried to find a gnome 2 desktop OS. I was thinking to use CentOS and did some tests but just found Stella yesterday. A quick install and I am convinced.
Great job!

Some requests as I need the following tools
Subtitleeditor, version 0.40
Kdenlive
Rubyripper

Do you have a plan for these appli?
I am a newbie but I just ended to rebuild Subtitleeditor in my Centos box. I have now the files
subtitleeditor-0.40.0-1.el6.x86_64.rpm
gstreamermm-devel-0.10.7-1.el6.x86_64.rpm
gstreamermm-0.10.7-1.el6.x86_64.rpm

I didn't install them in Stella so far.
Do you think I could try. The Stella install I use at this time is a test box and will be completely erased after for a stable use.

Thank you for your time.

I'll have a look at backporting these. I'll update this post with details in the next few days.

```
yum --enablerepo=nux-dextop-testing install kdenlive
```

Let me know if it works according to your expectations so I can move it out of testing.

I installed Kdenlive and had a quick look. So far so good but I will have to go further later.

I'd like to use as well
Oracle Virtualbox. Is it safe to install the Cento06 at virtualbox.org (I can't write the full link)

I used to use Multisystem for USB key at
[pendrivelinux.com/multiboot-create-a-multiboot-usb-from-linu x](http://pendrivelinux.com/multiboot-create-a-multiboot-usb-from-linu-x)
but I think it is only for Ubuntu distro. If there is no way I will use Ubuntu in a virtualbox.

What about subtitleeditor v 0.40?
Many thanks

Hi,

I believe the Virtualbox rpms should work ok, but I can't really verified this. I switched to KVM
100% some time ago.

Regarding the subtitle editor, I'll give it a go today and update this post.

"subtitleeditor" should be in main repo, check it out.

Hi,

Very fast answer, many thanks. However, I have some issues.

Now I have one laptop (64 bit) and one desktop (64 bit) with Stella. Same install.

I installed subtitleeditor on the both. Laptop is working well but I got an error on the desktop.
The error occurs when I open the .avi (mpeg4) video file.
Media file could not be played.
Configured videosink videobin is not working.

I'd guess it is a codec install issue but not sure.
On the laptop I can play the video with subtitleeditor, Totem, vlc but only audio with Mplayer.
On the desktop I can play the video with Totem, but only audio with vlc and nothing with Mplayer.

I tried to compare installed packages unsuccessfully.
Could you please advice me what package I have to install to get the more common audio/video codecs.

Thank you for your time and your patience.

BTW, if you get a chance, I could be very interested to know what is your process and first packages to get the el6.nux rpm. I did it previously with mock.

Edit

I did an update of VLC

```
yum --enablerepo=nux-dextop-testing clean all && yum --enablerepo=nux-dextop-testing update vlc
```

but my .avi file has only the audio, no video

Can you post `rpm -qa` from both systems somewhere or attach them here?

Hi,

Good news, this morning I started my desktop from cold and tried VLC and Subtitleeditor and... everything is working like a charm!!!

Can't understand as I rebooted (warm only) yesterday.
I will work with it and let you know if everything is OK.

Thank you

PS: Maybe you could remove my 2 previous post as they are big.
