Following the release of Centos 6.4 recently I'm pleased to publish the same version of Stella.

There is nothing special about this release other than the changes brought in by EL 6.4.

Download from the usual locations:

<http://mirror.li.nux.ro/li.nux.ro/ISO/>

<http://ftp.ines.lug.ro/li.nux.ro/>

Enjoy!

Are there any changes required to your .cfg kickstart file to accomodate Stella 6.4 ??

Please advise

Len

Nope. 6.3 one should work. I don't think the kickstart will ever change in the course of 6.x.

Just installed 6.4 yesterday. Very nice. Dident take long at all to set up the new install. One question what usb image writer program do you recomend? I always like to have one installed on my lap top.

You can use Unetbootin, at least it's what I use to write Stella on usb sticks.

Only trusted and 100% err proof is "disk dump" IMHO.
