Is it possible to upgrade to Stella 6.4 from within Stella 6.3?

If you have it installed and have performed all the package updates then you are already upgraded to 6.4. If not, perform the upgrades and you will be up to 6.4.

yum update as root in the command line or as normal user through the Software Update utility should give you 6.4, as fragadelic mentioned.

You can check with `cat /etc/redhat-release`.

So this would work for any version 6.3 to 6.7?

Yes, "yum update" will keep you on whatever is latest.

OK, there might be a problem with elrepo, it keeps failing, but I'll keep trying. I'm just hoping I don't have to d'l an iso and save the bandwidth. . .

Some logs could be of help. What do you mean "failing"?
