hello everyone!

this distro is indeed a sleeper!! wow- exactly what i was looking for minimalistic, light, stable, and most important...Fast!! Really loved #! but couldn't get past an error on install bug with the CD rom drive. I tried many other distro's except most didn't offer non-pae support; Liked Bohdi but wasn't light did some researching and found this- The Install was a breeze- easily found my wireless card and quickly ran all the updates. My old Dell 600m has a whole new lease on life 8)

Glad to have found Stella!
