hello nux,

i am looking for spider/webcrawler for offline reading <http://www.httrack.com/> some info from ubuntu @

<http://www.linux-magazine.com/Online/Features/WebHTTrack-Web site-Copier>

<http://rpmfind.net/linux/rpm2html/search.php?query=httrack&a mp;a mp;a mp;submit=Search+...&system=&arch=>

can you please compile/add this to stella's repo...

<http://www.httrack.com/page/2/>

or can you offer a similar/alternative package that will do the same as the windows httrack.com software. thanks again.

Hi,

Have you tried "wget"?
eg

<http://www.createdbypete.com/articles/make-a-local-website-mirror-with-wget/>
