Hi Nux,

Would it be possible for you to add the Roaring Penguin package to the iso itself?

Here is the link - <http://www.roaringpenguin.com/products/pppoe>

Also, if possible, can you also add the infinality fonts and the Development related packages to the iso?

Per your update, you have added the infinality fonts to the repo, but it will be great if Stella came with the packages pre included in the iso file.
