Hello,

I have backported LibreOffice 3.4.5 from Fedora 16. The packages are currently undergoing testing, but I'm fairly confident they're OK. If you have the nux-libreoffice repo installed (which you do if you run Stella) do the following to get it installed:

```
yum --enablerepo=nux-libreoffice-testing update libreoffice*
```

Let me know if you run into issues (by opening a post here http://forums.nux.ro/index.php?t=thread&frm_id=10&).

The packages have been moved to the main repository: nux-libreoffice and you should see updates shortly.

As of EL6.3 Libreoffice is included in the main repos, hence obsoleting nux-libreoffice. You can safely ignore this thread.
