Hi,
the last package for skype is from Fedora 16 (i586) and that`s the available package
http://li.nux.ro/download/nux/dextop/el7/x86_64/
I tried to install it (don`t really need it) and get this messages:

failure:
repodata/4dfbce14f5c81f97971337c077f97becdf78d779c9957ff78ec84a4ffc9c0678-filelists.sqlite.bz2 from nux-dextop: [Errno 256] No more mirrors to try.

Yum is running well with other packages, Tried -yum clean all- without success.
Don`t know if it`s already posted here?
The package is obsolete, isn`t it?

Hi,

It's working fine for me, give it 10-20 minutes and try again, perhaps the mirror is not very consistent.

Yup,
now it works also with skype.
I have tried it with other packages from you repo without any problem, only skype won`t.
Sometimes are little gremlins fooling around. :d

Thanks for your reply

I did some work on the repo yesterday and had to sync the mirrors a few times, perhaps it's related, although can't explain why you only got issues with Skype.
