Hi,

Firstly thank you for providing a great repo 8)

Now to the topic at hand, when installing livecd-tools I get the following error:

```
--> Processing Dependency: /sbin/extlinux for package: 1:livecd-tools-20.1-3.el7.nux.x86_64
```

```
--> Finished Dependency Resolution
```

```
Error: Package: 1:livecd-tools-20.1-3.el7.nux.x86_64 (_local)
```

```
Requires: /sbin/extlinux
```

```
You could try using --skip-broken to work around the problem
```

```
You could try running: rpm -Va --nofiles --nodigest
```

To resolve this, I have to first install 'syslinux-extlinux', and then install livecd-tools.

I am unable to install both packages at once i.e.

```
yum install syslinux-extlinux livecd-tools
```

as it still complains of the missing binary at /sbin/extlinux... it would be great if livecd-tools could correctly pull in 'syslinux-extlinux' as required.

Oh, and there is a new release of livecd-tools from what I can tell at github.com/rhinstaller/livecd-tools and the home of this package has changed.

Thanks,

Rich

```
yum --enablerepo=nux-dextop-testing install livecd-tools
```

Let me know if you see any issues so I can move it to the main repo.
