(:) (NB -- I have used Nux's latest .ks file for remastering purposes, available from <http://paste.fedoraproject.org/276060/42426991/raw/>)

Livecd-creator is part of livecd-tools-13.4.8 (which has a dependency, python-imgcreate-13.4.8) provided by the EPEL repository.

A custom Stella 6.7 remastered with it proceeds normally through installation except for the last post-install phase which terminates abnormally with an error code 22.

The replacement packages which cure this problem, available on the web, are newer versions from Scientific Linux, livecd-tools-13.4.10 and python-imgcreate-13.4.10.

On the host Stella 6.7 system on which livecd-creator is to be run, remove the 2 version 13.4.8 packages, and local install the 2 version 13.4.10 packages.

To ensure that the newer packages are incorporated in the remastered Stella 6.7, utilize a local repository from which to include the new packages, and add a --excludepkgs=livecd-tools,python-imgcreate parameter to the EPEL repo definition in the kickstart file.

:cry: NB: The result I described in the original post was genuine enough, but there is a potentially serious problem with the software replacement that was used. The replacement versions for livecd-tools and python-imgcreate were NOT 13.4.10, but 13.4-10, meaning they were not new fresh versions, but very old versions from 2012.

I will continue to investigate this, and come back with an update when I can

:? I've now completed two more livecd-creator tests.
The following table summarizes the results to date.

(livecd-tools and python-imgcreate packages)

SOURCE.....VERSION.....DATE PACKAGES CREATED....INSTALLATION RESULT

SL.....13.4-10.....2012.....worked

EPEL.....13.4.8-1.....June 9, 2015.....failed

SL.....13.4.7-17.....August 27, 2015.....worked

EL.....13.4.9-1.....2015.....failed
.....(still a test version)

Pending new developments, I'll continue to use 13.4.7-17.

What's adding to my confusion is that I'm having the same problem in trying to customize SL6.7, and none of the above versions work on it. ----> ?????

Len

Yeah, it's messed up. No idea tbh. Have you tried contacting the SL ml?

:) For SL6.7, I tried using the older EPEL livecd-tools and

python-imgcreate packages, Version 13.4.5, and fortunately, it worked.
