
Subject: Web gui login not working Tvheadend

I have installed Tvheadend 4.1.322 from the NUX repo onto CentOS 7.2.1511 and cannot login to the web gui. During the rpm installation I was not asked to create a user and password. I have tried the obvious (only two users on new CentOS install, root and an administrator) users on the OS and neither allow access. I have searched the internet and cannot find any mention of a default user. And I thought I read that an initial installation of TVheadend does not have a user and password set. I have disabled selinux (for now) and opened the 9981 and 9982 ports of the firewall and I have gui access via a browser.

In this rpm Tvheadend package is there a default user and password?

This is my /etc/sysconfig/tvheadend

```
OPTIONS="-c /home/tvheadend/config -u tvheadend -g tvheadend -6 --http_port 9981 --htsp_port 9982 --noacl"
```

AFAIK it does not ask me for a password.

Subject: Re: Web gui login not working Tvheadend [SOLVED]

Thanks. That worked for me. (CentOS 7 installation is a little different from OS I have used in the past.)
