Hi,

I did an install from Stella to CentOS 7 on my Linux box.

I don't know if this is the right place but I use nux repo so maybe you can help.

Previously with Stlla 6.2 I had Subtitleeditor, see

Is it possible to get it in the repo for Centos 7 ?

Many thanks

It only took me 2 months, but can you give this a go and let me know if it works fine? :)

```
yum --enablerepo=nux-dextop-testing install subtitleeditor
```
