Hi there... After many failed attempts and tutorials, I finally managed to get Wine up and working on Centos7. Now my Chess software is up and running for my greatest satisfaction (I know, not a big deal, but I like it).

I essentially followed the instructions found on this site:

<http://stackoverflow.com/questions/20971960/the-right-way-to-install-wine-on-centos-6-64bit>

I personally left out the make.log parts of the instructions. I also downloaded the 1.9.20 version of wine from <https://dl.winehq.org/wine/source/1.9/> before starting.

Please report here if you failed in the past at installing Wine on CentOS and are getting it done by now.

Cheers
