Have followed instructions I found in the forum for installing Caffeine. Get the following error message:

Cannot open: http://mrb.mandrivausers.ro/MRB/stella/x86_64/caffeine-2.2.3

86-1stella.noarch.rpm. Skipping.

Error: Nothing to do

I have installed Caffeine before, but this time cannot get it to work.

Nothing works. Sorry. Maybe I just don't understand the instructions properly. Anyway, I eventually gave up.

Never give up. :)

I'll try to add it to my main repo so you can simply "yum install caffeine".
