I am looking for installing all the Penetration testing software as of K.A.L.I linux to CentOS. I searched on the Internet where I found a script Kaatoolin is available but it doesn't work on CentOS based systems.

How can I install these softwares on CentOS?

When you say it doesn't work, what do you mean, do you get an error when you run it?

Hi Nux, when I try to run it, I get the error as

- 1) Add kali linux repositories
- 2) Update
- 3) Remove all kali linux repositories
- 4) View the contents of sources.list file

```
What do you want to do ?> 1
sh: apt-key: command not found
sh: line 1: /etc/apt/sources.list: No such file or directory
```

- 1) Add kali linux repositories
- 2) Update
- 3) Remove all kali linux repositories
- 4) View the contents of sources.list file

```
What do you want to do ?>
```

Well, the mention of apt-get there makes me think those packages are made for Debian/compatible distributions, but RPM based ones such as CentOS and Fedora.

So, is there any way to install these packages on CentOS?

If you can give me a list of packages, I can try.

I am looking for the tools like Metasploit, Nmap, Armitage, Wireshark, Burp Suite, Social Engineering Toolkit, Aircrack-ng, BeEF, Maltego, Ettercap, Nikto Website Vulnerability Scanner, ollydbg, etc.

deb-src <http://http.kali.org/kali> kali-rolling main contrib non-free

Hi,

I'll have a go, but when I have some more time as it's a fairly long list. From what I could check quickly, at least a few if not all provide either tarballs with binaries or RPMs. I'd suggest going through them and check which actually don't provide either. For example Metasploit provide official RPMs while Armitage has a tarball with binaries that could be used.
