Hello!

I make rpm package Nestopia with turbo-keys and flashback (Game can be returned back and to change). May I ask to check a package and to add it to repository? :)

Hello and thanks, but I'll need the SRPM, not the RPM.

like this?

Sorry, first time I do it :)

I see this is originating from RPMFusion in fact, did you do any changes?

Anyway, the rpmsfusion SRPM does not build for me:

```
configure.ac:119: error: require Automake 1.15, but have 1.13.4
autoreconf: automake failed with exit status: 1
```

I'll look at using newer auto-tools.

Ok, built it with F24 automake, all is good, added to the repo.

Please test if you can and report any problems so we can fix them.
