Hello Nux  
Been a long time since I posted. Still using 6.8 (final) daily with no issues. 8)  
I saw mention of 6.10 on the Centos forums. Has there been any notable changes?  
Just curious.

Enjoying your distro and not looking forward to 2020 when Centos stops supporting  
Gnome2. Maybe Mate after that, eh? :)

Stay healthy and thanks!  
Ongoto

Hi,  
  
6.10 is maintenance release, nothing really that notable.  
I was lazy in updating to the new release, but you should still get all the CentOS 6 updates  
regardless. :)

Thanks Nux  
  
Stella let's me get stuff done in a hurry with no hassles.  
Best distro ever in my opinion.

Thanks :)  
  
You should however consider upgrading, EL6 is starting to show its age.  
CentOS7 + MATE is not half bad, have a go.

Thanx for the heads-up Nux.

Have Centos 7 installed using both Mate and Gnome 3. Very stable. I think I'll stay with it.

Ubuntu Mate is pretty good too, but Debian rules are in your face all the time. Centos much better.

Cheers :)
