Hi All,

Can the NUX repository update to the latest MakeMKV version for Centos 7? Its a bit behind and the new updates make it much better to use. It seems all the required libraries are available (since I had to build it from source).

Thanks,
-Eric

Hi,

Can you please try this out and let me know if there are any issues?
<http://li.nux.ro/download/nux/tmp/makemkv7/>

If all's well I'll move it to main repo.
