Hi guys!

Just installed Stella 6.7 and cannot mount my ext drives. Neither xfs, nor btrfs. Cannot even mount ext4 drive.

Any help is appreciated!

Thank you!

Hi,

How are you trying to mount them and what error are you getting?

Actually, before you do any more tries, can you run a "yum clean all" and "yum -y update" to make sure you're on the latest patch level?

Upgrading the kernel solved it.

Thank you, nux!

P.S. For the record the old kernel was giving this message

Error mounting: mount: wrong fs type, bad option, bad superblock on /dev/sdb6,
missing codepage or helper program, or other error

for xfs, btrfs, ext4 partitions.
